

Quantum Shift AI Practitioner+

Capstone Projects Guidelines: Cursor

Project Duration

- **Start Date:** Tuesday, 11-Aug-2026
- **Submission Date:** Tuesday, 18-Aug-2026

Objective

The Capstone Project aims to enable participants to apply the concepts, tools, and techniques learned during the AI Practitioner+ Program using Cursor to solve a real business problem.

Participants are expected to develop a working solution and demonstrate how AI can improve productivity, efficiency, decision-making, or business outcomes.

Deliverables

1. Working Solution

Participants must develop a functional prototype, proof of concept, automation, application, or AI-assisted solution that addresses the selected business problem. The solution should demonstrate the effective use of AI tools throughout the development lifecycle.

2. Solution Presentation (5 Slides)

Participants must prepare a concise executive presentation covering the following sections.

Slide 1: Context and Why Now

Challenges and Impact

- What business problem exists?
- What challenges are currently being faced?
- What is the impact on the organization, team, or users?

Strategic Imperative

- Why does this problem need immediate attention?
- What business drivers support the initiative?

Shift in Operating Model

- How are AI and automation changing the way the work is performed?

Slide 2: Current Challenges and Gaps

Describe:

- Existing process or workflow
- Pain points and inefficiencies
- Manual activities
- Productivity issues
- Technology gaps
- Business limitations

Slide 3: Vision and Future State

What Your Project Will Enable

- Improved efficiency
- Faster decision-making
- Better customer experience
- Reduced effort or cost

Strategic Outcomes

- Business value generated
- Expected benefits
- Productivity gains

Future State Operating Model

- How work will be performed after implementation
- Role of people, process, and AI

Slide 4: Solution Overview

Provide:

- Solution architecture or workflow
- Key features and capabilities
- AI tools used (Cursor)
- Brief description of each capability

Slide 5: Business Flow and Role of AI

Illustrate:

- End-to-end business workflow
- User interactions
- AI intervention points
- Decision-making support
- Automation opportunities

Submission Requirements

Participants must submit:

1. Working solution or source code.
2. Five-slide presentation.
3. Demo screenshots or short demonstration video (optional).
4. AI prompts, instructions, or configuration files used during development (recommended).

Important Notes

- Teams should focus on solving a business problem rather than building a large-scale application.
- AI should be used responsibly and effectively throughout the project lifecycle.
- The solution may be a Proof of Concept (PoC), Minimum Viable Product (MVP), or working prototype.
- Simplicity, business impact, and innovation are encouraged.
- Final presentations and demonstrations will be conducted during the project showcase session.
